

WinCrest Care Instructions

Important!

WinCrest acts as a protective layer on the windshield. It reduces chances for the glass to break.

Next 72 hours

WinCrest may take up to 72 hours to fully cure and bond to glass.

Therefore, we recommend avoiding leaving the vehicle out in extreme weather conditions, driving on rough roads or getting a commercial wash during this period.

Extreme Weather

Rough Roads

Car Wash

Cleaning

1 Regular maintenance

1. Clean your windshield using the above materials at least once a week.
2. Please make sure you rinse it well after cleaning.

2 Cleaning materials

Use a clean microfiber cloth, sponge, clay bar, or soft brush to prevent scratching.

Recommendation

Microfiber Cloth or Sponge

Ammonia-Free Glass Cleaner

or

Mild Soap & Water

3 Clean immediately

Substances such as tree sap, bird dropping, salt spray, insects, tar, oils etc. should be cleaned off immediately.

Salt Spray

Bird Droppings

Insects

To extend product life span

Avoid

- 1 Sharp objects, direct high-pressure water (stay at least 3f [1m] away when spraying), harsh chemicals, hard brushes etc.
- 2 Leaving your car parked in extreme heat.

Wiper Care

1 Use washer fluid

Always use washer fluid when using your wipers to prevent scratching the film.

2 Clean under the wiper blades

Use a microfiber cloth with washer fluid or ammonia-free glass cleaner to wipe along the underside of the blades to remove any kind of residue.

3 We recommend replacing wipers once every 3-6 months.

4 If you see this!

Streaking

Chattering

Smearing

Split Rubber

Squeaking

Recommendation

1. Get new wipers.
2. Try switching to silicon wipers.
3. Limit unnecessary wiper usage.
4. Refrain from using wipers on auto-mode.
